

Performance vs. Geometric Approximation Quality (Flexi-JEGNN, n=20)

Shaded band = ± 1 SD · Dashed line = OLS over L0–L3 · [r] = Pearson r (regression task) · Others = ROC-AUC

All Cohen's f effect sizes ≤ 0.12 — at or below small-effect threshold.

Frequentist tests powered only for $f \geq 0.35$; moderate Bayesian support for the null.
